HETRONIC

# ERGO F

The HETRONIC **ERGO F** transmitter is the next generation of the industry leading **ERGO** series hand held transmitters. The **ERGO F** incorporates several new technologies that make it extremely flexible and cost effective. Like its predecessor, the **ERGO F** offers high reliability and high quality at a competitive price.

## Typical Applications:

While mostly used on overhead cranes in the industrial market, the **ERGO F** transmitter is also used in applications such as rock-crushers, self-erecting tower cranes, boat lifts, mono-rails and much more

The **ERGO F** pushbutton transmitter's ergonomically designed profile allows for easy single-handed operation. The highly reliable membrane switches are available in single, dual and triple speed.

The **ERGO F** is mostly used in standard configurations. However, it is also available as completely customized systems. Contact Hetric and let our engineering staff tailor an **ERGO F** system to fit your needs.

The **ERGO F** pushbutton transmitter incorporates Hetric's H-Link technology. H-Link is an intuitive and user-friendly software that runs on a PocketPC, providing remote access to the settings and parameters of the radio remote control.

Individual settings are accessed and configured using the PocketPC and then uploaded wirelessly, via the Hetric H-Link modem to the transmitter. The configuration of a radio remote can be changed or customized from a distance of up to 20 meters (60 ft)!

*ERGO F transmitter with four-motion, three speed pushbuttons*

*PocketPC with H-link software and modem*

### About Hetric:

HETRONIC is specialized in safety radio remote controls. Our four manufacturing facilities and our sales representatives in over 45 countries provide maximum knowledge and support for our customers. We're confident that our innovative products will increase the safety and efficiency of your machines.
